

COMPANY PROFILE

KHAWARZ

CUSTOM AI AGENTS
FOR BUSINESSES

From Knowledge to Intelligence. From Intelligence to Impact.

Khawarز didn't begin as a technology solutions company. It began as an idea, one that grew over time and widened its vision until it became a venture devoted to turning the potential of artificial intelligence into real value for business.

OUR JOURNEY IN FOUR STAGES

01

THE NAME BEHIND THE VISION

The name that inspired our vision

02

MAKING AI ACCESSIBLE

From an idea to a knowledge platform

03

BUILDING AN AI KNOWLEDGE COMMUNITY

From creating content to enriching knowledge

04

TURNING AI INTO BUSINESS VALUE

From knowledge to practical solutions

Founded by

Serving the GCC

Focus

Enterprise AI agents

Custom-built for business

THE NAME BEHIND THE VISION

The name that inspired our vision

The journey began after graduation, in conversations about technology and artificial intelligence and what they could offer society as the world changes at an accelerating pace. Working closely with students and tech enthusiasts, we noticed a gap between how fast the field was advancing and how clearly its ideas were understood by most people.

That is where the idea took shape: a project that would bring these technologies closer to society and make them easier and clearer to understand.

Searching for an identity to carry that idea, we took the name Khawarizmi from the Muslim scholar Abu Abdullah Muhammad ibn Musa al-Khwarizmi, one of the most important mathematicians in history. His name is bound to the development of algebra and arithmetic, and its Latin form gave the world the word Algorithm.

The name was never just a linguistic choice. It ties our vision to a scientific legacy that shaped a fundamental part of mathematics and computing, and it reflects our belief in turning knowledge and method into tools that open new horizons for the future.

And so Khawarizmi began: with an identity drawn from a legacy of knowledge, and a vision set on the future of artificial intelligence.

MAKING AI ACCESSIBLE

From an idea to a knowledge platform

Our next step was to turn the vision into a real experience.

We saw a gap in simple, Arabic-language content about artificial intelligence, and a gap between how quickly these technologies were evolving and how well a non-specialist audience could understand them and what they make possible.

We didn't want to speak only to specialists. We wanted to reach people who had never used AI and answer their most basic questions: What is artificial intelligence? Why did it emerge? And how could it shape our lives and our future?

So we launched Khawarizmi as a knowledge platform that simplifies AI concepts and explains them clearly, helping people understand the field and discover its possibilities with no technical background required.

That stage was the starting point of the Khawarizmi identity, built on the conviction that understanding technology should not stay confined to specialists. Knowledge should be open to everyone.

BUILDING AN AI KNOWLEDGE COMMUNITY

From creating content to enriching knowledge

As the platform grew, our vision reached beyond the basics, and Khawarz's content moved steadily toward deeper subjects for AI enthusiasts and specialists.

The idea expanded to include working with content creators, researchers and people passionate about the field, giving them a space to publish their research, ideas and contributions through Khawarz.

That step came from a belief that knowledge advances not only by simplifying information, but through the exchange of expertise, a diversity of perspectives, and giving specialised research the chance to reach a wider audience.

In this way Khawarz grew from a platform that introduced the public to AI into a project that enriches specialised Arabic content and strengthens the exchange of knowledge in the field.

TURNING AI INTO BUSINESS VALUE

From knowledge to practical solutions

As Khawarz kept evolving, we turned to the next stage of the journey: how do we move AI from the world of knowledge and exploration into the reality of business?

We realised that the growing capabilities of these technologies open wide horizons for companies, and that benefiting from them takes more than knowing about them. It takes understanding business needs, identifying the right opportunities, and turning technical capability into practical solutions that can actually be deployed.

So Khawarz took its next step and specialised in AI solutions for business, helping companies put these technologies to work in ways that fit their needs, improve their operations and create new opportunities for growth and innovation.

Our ambition is no longer limited to explaining what AI can do. It now centres on helping turn that potential into applications of real value.

We start from Kuwait, with the ambition to build a strong presence in the local market, expand across the Gulf and reach global markets. We want Khawarz to be part of the worldwide shift toward AI adoption, through solutions that answer real business needs and keep pace with the future.

— THE JOURNEY CONTINUES

Turning AI Potential into Real-World Impact.

From an idea that took its name from the history of science, to a knowledge platform, to a company focused on building AI solutions for business, the Khawarz journey reflects our belief that the real value of technology lies not in its capabilities alone, but in our ability to use them to solve challenges and open new horizons.

KHAWARZ — Turning AI Potential into Business Impact.

Custom AI agents for the enterprise

We design and build AI agents that work inside your real systems. They understand the goal, plan the steps and carry out the work securely, while your team keeps the final say.

01 Multi-step reasoning

Agents that break a complex task into steps, call the right tools and data at each one, and check the result before handing it over.

02 Built into your ERP and CRM

Direct integration with SAP, Oracle, Odoo and your CRM, so the agent works on your real data instead of people copying it between systems.

03 Private, secure hosting

Runs in a private cloud (VPC) or on your premises, with fine-grained permissions and a full audit trail of every action the agent takes.

04 Custom workflow execution

Automates your workflows as they actually run, from request to close, with human approval points wherever they matter.

INTEGRATES WITH

SAP

Oracle

Odoo

Microsoft Dynamics

Salesforce

WhatsApp Business

Built for the industries that run Kuwait

01 Banking & Fintech

- Customer document review and KYC checks
- Flagging unusual transactions and drafting compliance reports
- An internal assistant that answers staff from policies and regulations

02 Logistics

- Automatic matching of invoices and bills of lading
- Shipment tracking and customer enquiries answered
- Route planning and early delay alerts

03 Legal

- Contract review with clause and risk extraction
- Research across precedents and legislation in Arabic
- First drafts of memos and correspondence

04 Healthcare

- Appointment scheduling and reminders
- Summarising patient records for the doctor before a visit
- Processing and following up insurance claims

05 Retail

- 24/7 customer service on WhatsApp and the web
- Demand forecasting and inventory management
- Writing and updating product descriptions in Arabic and English

An architecture that keeps your data inside your walls

L1 **Your data sources**

Documents, databases, ERP and CRM, exactly where they are, never moved to an outside party.

L2 **Private retrieval (RAG)**

A private index lets the agent retrieve the right information from your data and cite where it came from.

L3 **Private LLM orchestration**

Language models run in a private environment, with the best model for each task chosen on accuracy and cost.

L4 **Guardrails & audit**

Rules that block unauthorised actions, output checks that reduce errors, and a complete log of every step.

----- Zero data leakage: your data is never used to train any outside model. -----

— SECURITY & TRUST

Data sovereignty

Hosting in Kuwait or on your premises, to match your regulatory requirements.

Confidential from day one

We sign an NDA before we see any data or system.

Accuracy you can verify

Answers tied to their sources, testing before launch, and human review wherever it's needed.

On-premise ready

The whole solution can run inside your own infrastructure with no outside connection.

From idea to an agent running in your business

ENGAGEMENT MODELS

01

Enterprise Pilot (POC)

A focused trial on one use case to prove the value before you commit.

02

Custom Agent Build

We design the agent, connect it to your systems and launch it with your team.

03

Retainer & Evolution

We monitor, improve and extend the agent as your business grows.

OUR PROCESS

01

Discover

We map your workflow and find where the time and effort go.

02

Design

We define the agent, the integrations and the outcomes we will measure.

03

Build

We build, test and launch with your team, and you stay in control.

04

Support

We monitor, improve and scale as you grow.

From Knowledge to Intelligence. From Intelligence to Impact.
